

VOZ DEMOGRAPHICS EXPLAINED

Your guide to understanding the demographics available in the VOZ database and within VOZ Gold Standard software tools (TPSS), the VOZ Reach & Frequency (R&F) Portal and VOZ Quarter Hour (QHF) Data files.

Background

As part of the construction of VOZ, OzTAM's Video Player Measurement (VPM) census level data is enhanced via BVOD demographic modelling to deliver person-based measurement of viewing to live and video on-demand streaming broadcaster content. The demographics available in VOZ largely reflect the demographics currently in the BVOD demographic model and will continue to evolve over time.

Topline demographic changes for VOZ

The demographic groups listed below are not available in the VOZ dataset.

- Total Households
- Age groups of 16-24, 18-29, 25-44, 30-49
- All Grocery Buyer (GB) related demographics
- All Occupational Group related demographics

In most cases, there will be demographics that closely align to any unavailable demographics in VOZ, and it is suggested that you speak with your planning team or relevant network to help guide alternative options.

Grocery Buyer vs Grocery Shopper

The removal of the Grocery Buyer (GB) demographics aligns with the introduction of Grocery Shopper (GS) demographics that have been available since 2017.

This newer GS demographic was introduced to reflect the change in the grocery shopping role within the home, as it includes the main grocery buyers as well as alternate grocery shoppers within the home.

TPSS demographics

Third Party Software Suppliers (TPSS), provide the flexibility to use the available VOZ standard demographics or combinations of demographics nationally and for any individual market.

The standard demographics shown in the table below are the building blocks to create any customised demographics.

In most cases, TPSS's will analyse data from the Respondent Level Data (RLD) dataset (RLD is also referred to as Minute x Minute (MxM) or Elemental datasets in some industry tools and systems.).

	Children	People	Females	Males	Grocery Shoppers

*Grocery Shoppers plus Children is only available for analysis of broadcast TV.

**From research day Sunday 27th October 2024, and going forward, demographic groups People/Men/Women 35-54 and 35-64 will be available to analyse and report on Total TV and BVOD, as well as broadcast TV. Prior to this date analysis is only possible for broadcast TV.

More information on TPSS is available in [TPSS Explained](#).

VOZ Universe Estimates are available [here](#).

QHF demographics (Mediaocean)

QHF's are delivered with a specific set of pre-defined trading demographics that align with the current TAM TV ratings service. Given VOZ caters for both broadcast TV and BVOD viewing, there have been some changes to the availability of demographics in the broadcast TV QHF (which are primarily used for trading and available via Mediaocean Spectra).

A reduction in available broadcast TV demographics as follows:

- Metropolitan: 88 VOZ demo's vs 183 TAM TV ratings demographics
- Regional AGG: 74 VOZ demo's vs 138 TAM TV ratings demographics

Individual demographics can be aggregated in the QHF to create broader groups. E.g. People/Men/Women 25-64 (aggregation of 25-39 and 40-64).

Note that individual networks may be trading on a smaller sub-set of the available VOZ demographics for fixed or dynamic client campaigns. Any queries related to trading demographics should be directed to the relevant Network representative.

*Queensland, Northern NSW, Southern NSW, Victoria

** Sub Markets are available in the Quarter Hour files but not in the VOZ Total TV database or VOZ R&F Portal

Quarter Hour trading file delivery:

- Metropolitan and Aggregate markets including Tasmania delivered daily
- Regional WA and Sub Markets delivered 4-weekly

Rest of Australia is a research area, not a trading territory and therefore not included as a market in the Quarter Hour Files.

TARPS are calculated against 1+ TV homes universe estimates for each available demographic.
